Villa Marina Yacht Harbour Expansion
Sardinera, Fajardo

Dear Mr. Ferrer:

This letter is in response to your application for Certification of Consistency with the Puerto Rico Coastal Management Program (PRCMP) for the construction of a new marina as part of an expansion of the existing one. The project consists in the construction of 125 slips for medium size boats and the construction of a breakwater with dimensions of 398 feet long, 18 feet high, 35 feet wide in the bottom and 15 feet wide on the top. The project is located at Sardinera Bay, Sardinera Ward, Fajardo, Puerto Rico.

The application at reference was submitted in order to obtain U.S. Army Corps of Engineers permit for the above mentioned project. The review period began on March 5, 2003 when the application was considered complete. An extension of thirty (30) days for the review of this application was agreed on August 22, 2003.

The application and accompanying documents were sent to the Department of Natural and Environmental Resources (DNER), the State Historic Preservation Office (SHPO), the Council for the Conservation and Study of Underwater Archaeological Sites and Resources (CCSUASR), Fish & Wildlife Service (FWS), the Environmental Quality Board (EQB), the National Marine Fisheries Service (NMFS), and the Municipality of Fajardo. Public notices were also issued. A summary of the comments received from these agencies and the public in general follows:

Federal Consistency Determination

CZ-2001-0529-117

Page 2

DNER: this agency did not submit their comments during the granted period. Notwithstanding the PRPB sent them the most recent submitted information and a meeting was held on August 21, 2003 with the participation of representatives of the Puerto Rico Planning Board (PRPB) and the DNER in order to discuss the proposal. Finally, the DNER sent a letter dated september 3, 2003 (enclosure 1) in which they informed that this agency has notified the applicant in four occasions (letters dated November 23, 1999, August 31, 2000, February 27, 2001 and May 9, 2001) that the submitted information did not discussed their concerns about the project. Regarding the impacts on navigation, the DNER commented that they should wait for the Coast Guard comments and regarding the submitted studies (Bathimetric study, Wave Refraction and Defraction Study and Hidraulic Breakwater Stability Analysis) this agency informed that it were referred to the U.S. Army Corps of Engineers for their review and comments, so additional time will be required for the evaluation of these documents.

EQB: confirmed that the site consultation was filed by request of the applicant so they will not continue with the evaluation of the submitted environmental document.

FWS: during the evaluation of the proposed dredging for the existing inland marina this agency has expressed that they do not have records of endangered species. Notwithstanding the sent a letter later expressing concern for the potential impacts of the proposed Villa Marina and other proposed expansions on the endangered manatee. They strogly recommended to consider the cummulative impacts of the proposed marina expansions and new marina proposal at the area. (enclosure 2)

NMFS: this agency determined that the proposed expansion will not have significant impact on fishery resources at Sardinera Bay. There is no aquatic vegetation nor coral reefs within the project area.

SHPO: they informed that a Phase I study is required to complete the evaluation according to section 106 of the Historic Preservation Act.

Sea Grant: expressed no objection because they think that it is better to extend existing marinas than impact other virgin areas with higher ecological value.

Maternilo and Mansión del Sapo Fishermen Association: they submitted a letter with 99 signatures expressing objection to the proposal.

Mr. Frank D. Inserni expressed objection to the proposed marina expansion. He is concerned for the impacts that the proposed expansion will have in the water quality of the bay, marine ecology, boat traffic, and terrestrial vehicle traffic. He recommended that the need for more boat slips shall be evaluated because Fajardo have four marinas for medium size boats and there are multiple boat parking lots that will satisfy the demand for this service.

Mr. Richard Vito (Sea Lovers Marina owner) expressed objection to the proposal. He is concerned about the impact that the proposed project will have in his approved marina expansion of 46 slips. He argues that his approved expansion is not being considered and that the project plans submitted by the applicant do not correspond to the real dimensions of the Sardinera Bay. The most recent submitted project plans and drawings did not contain the correct distances between the approved Sea Lovers expansion and the new Villa Marina proposal. He expressed concerns about the restriction of space and increase in hazard to navigation because of the presence and location of the new breakwater and facilities among others. He also raised many issues related to the viability of the new breakwater.

The PRPB sent you a letter dated July 9, 2003 including the comments submitted by the agencies and the raised issues. You submitted a letter dated July 29, 2003 and three studies to answer the raised concerns.

The submitted studies were referred to the DNER for their review and comments. A letter was also sent to the U.S. Coast Guard to consult them about the aspects of navigation safety, but no response has been received until now.

After reviewing the submitted information and received comments the Puerto Rico Planning Board found that there remains many unresolved issues that are related with the PRCMP policies. These are the following:

1- The policy number 30.00, 30.01 and 30.02 establishes:

30.0 To protect natural, environmental and cultural resources from destruction or irreparable damage resulting from misuse, or from lack of foresight to address the adverse impact of other activities.

30.01 Reduce the adverse impact of pollution on natural resources by identifying and controlling the causes and sources of said pollution.

30.02 Control the activities involving land development, construction, and land subdivisions which may adversely affect water quality...

Federal Consistency Determination

CZ-2001-0529-117

Page 4

In order to ensure the consistency of the project at reference with these policies it is necessary to obtain the required compliance with the article 4c of the Environmental Policy Law (Law Number 9) because this is the mechanism established by the Puerto Rico Commonwealth for the evaluation and consideration of environmental impacts. The PRCMP recognizes the Law Number 9 of June 18, 1970 as one of the means of exerting commonwealth control. (See appendix B of the PRCMP)

- 2- The policy number 30.07 establishes: "Avoid the unnecessary loss, because of the introduction of new activities or the authorization of subdivisions, of future options in the use of resources, bearing in mind the following objectives:**

Avoid building structures in beach areas, discourage activities or land subdivisions in adjacent areas where they may impede or hinder free access to beaches; and encourage free enjoyment of panoramic views, free access to the sun and enjoyment of these areas by all the people.

The submerged lands where Villa Marina expansion is proposed is a coastal resource that belongs to the Puerto Rico Commonwealth. It is part of a public space that is shared by Villa Marina Yacht Harbor, the fishermen, Sea Lovers Marina, Puerto Chico Marina, Dos Marinas Tower residents and all the Puerto Rico people. Everybody have equal right to enjoy it. Villa Marina Expansion shall not have a significant impact on the public use of these waters and the existing activities. Therefore, a better justification in terms of public benefit shall be included within the documents for the evaluation of this proposal. The impacts on public use shall be carefully evaluated. The proposed expansion shall also be in harmony with the other existing marinas.

Therefore, pursuant to 15 CFR 930.63, the submitted information and based on the Federal Consistency Procedures with the PRCMP, the Puerto Rico Planning Board (PRPB) objects to your application for Consistency Certification.

In order to conduct the proposed activity in a manner consistent with the PRCMP you shall complete the following requirements:

- 1- The project plan shall be reviewed in order to include all the required information to evaluate the proposal and address the issues raised by Mr. Richard Vito. The project Plan shall include the bathymetry of the area and the correct dimensions of the Sardinera Bay. We recommend you to consult with the USACE representatives about the information that is required to include in the drawings.

- 2- The Environmental document shall be reviewed in order to include the most recently submitted studies, address the pending issues and complete the DNER requirements for the completeness of the document.
- 3- You shall obtain the EQB endorsement about compliance with the Article 4c of the Environmental Policy Law. This process shall be completed within the review process of the DNER permit for Submerged Land Use Consession. The DNER shall be the proponent agency for this proposal. It is commendable to consult with the EQB representatives about this matter. The Puerto Rico Planning Board is in the best disposition to help you in coordinating a meeting with representatives of both agencies to receive an adequate orientation.

Pursuant to 15 CFR 930 subpart H you have the right to appeal the Planning Board Consistency objection by filing a Notice of appeal with the Secretary of the U.S. Department of Commerce within thirty days of receipt of this letter. Your appeal must be based on one or both of the grounds that the proposed activity (1) is consistent with the objectives or purposes of the Coastal Zone Management Act (15 CFR 930.121), or (2) is necessary in the interest of national security (15 CFR 930.122). Copy of the notice and supporting information must be sent to the Planning Board.

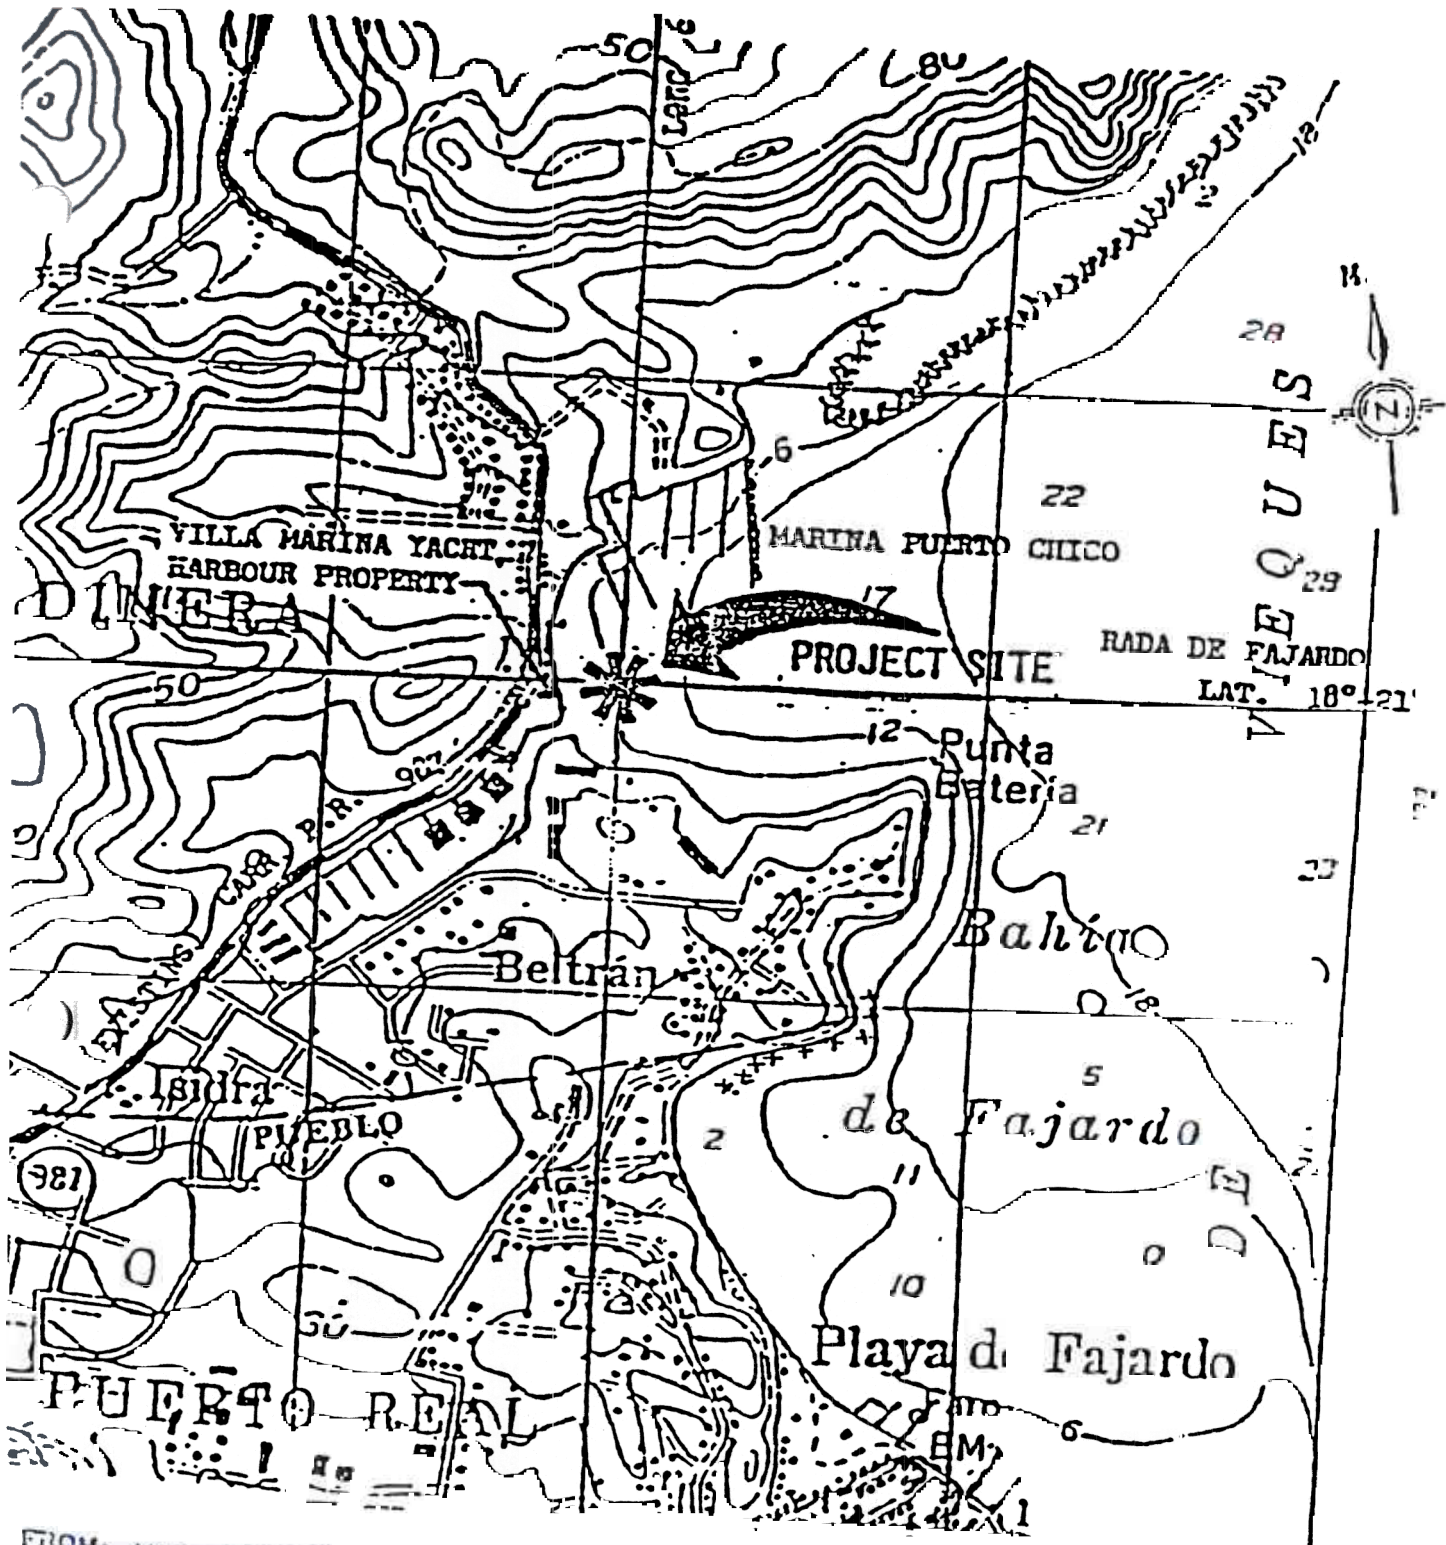

Sincerely,

Angel D. Rodríguez Quiñones
Chairman
